

Fritschi Diamir Vipec

REVISED 12-26-22

! assemble here with other half of template at the mark of your respective boot sole length

! toe line is not necessarily 15mm distant to pin line
- in case of doubts, orient template on pin line

! assemble here with other half of template at the mark of your respective boot sole length

! For midsole position:

- check on your boot, whether the boot center mark is really in the middle (for some boots it isn't)
- align with scale on toe and heel template to mid sole mark on ski (or measure 1/2 sole length from toe/heel edge to mid sole mark)
- when the template is fixed to the ski, check with your bindings and boots inserted, whether positioning is correct (also for screw positions)

! turn off information by using the PDF-layer function

! cut out separately and use to find midline
